DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-4, 6, 7, 10-19, and 21-28 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4, 6, 7, 10-19, and 21-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Tsuchiya (US 6,335,792).

Tsuchiya anticipates all claimed features in claims 1-4, 6, 7, 10-19, and 21-28.

Claims 1, 4, 6, 22, 26, 27, and 28: Tsuchiya discloses a method and apparatus to enhance imaging a target medium using optical tomography to direct energy into a target of interest from at least one source during a period of time, the target medium having heterogeneous or dynamic properties where the energy from at least one source is highly scattered by the target medium emerges from the target medium at different locations around the target medium, measuring the energy emerging from the target medium using multiple detectors positioned to detect the emerging energy at different locations where the energy emerging from the target medium has dynamic properties, and generating a map of the dynamic properties of the target medium based

on the measured energy emerging from the target medium at the different location (col. 3, line 48 – col. 5, line 13; col. 26, line 27 – col. 31, line 31)

Claims 2, 3, 7, 10-19, 21, and 23-25: Tsuchiya further discloses that the images are generated as series of time where the image properties of the target medium is based on measure energy emerged from the target medium representation of the cross-sectional properties of the target medium at time interval and the mapping generated from the process includes dynamic properties of the target medium (col. 5, line 42 – col. 6, line 19). In addition, Tsuchiya discloses using multiple frequency wavelength detection and the dynamic effect on the target medium where the energy directed toward the target medium serves as stimulus, which is near infrared energy (col. 33, line 11 – col. 34, line 63).
